MERSHON & MORLEY CO.,

MANUFACTURERS OF THE

M. & M.

PORTABLE HOUSES,

PATENTED

Saginaw, Michigan, U. S. A.

Office, Rooms 2, 3, Second National Bank Bldg.
Factory, Mershon Station.

Catalogue No. 6.

NOTICE—In your correspondence with us, please specify Catalogue No. 6.

The above cut shows one of our No. 05 5-Room Portable Cottages complete, without the porch (shown on page 25 of this Catalogue), as it appears loaded for overland transportation. Weight, 5,800 pounds.

MANY people take it for granted that a Portable House can be no other than a light, flimsy makeshift of a house and of little more protection from the weather than a good tent would be; not only this, but that it must be taken down and stored during the winter months. In the early days of manufacturing Portable Houses this supposition might have been true. Today, however, profiting by the mistakes of others, and with new and better ideas regarding the construction of such houses, and aided by modern wood-working machinery, we can, and do offer to the public a first class Patented Portable House, strong, durable, wind and water-proof, ornamental in design, and one not intended to be taken down unless it be to remove it to some other location.

They are constructed with Single Roof and Single Walls for a mild climate and summer use, Double Roof and Single Walls for extreme heat, and Double Roof and Double Walls for winter use.

The M. & M. Houses are reasonable in price, and will save the purchaser much loss of time, and the waste of material unavoidable under the ordinary methods of construction, and will also relieve him from all the annoyances of building.

They are made from a good grade of White Pine lumber, primed with one coat of paint outside. The side walls are made in sections 3 feet 2 inches wide from ¾-inch siding, tongued and grooved, each being a duplicate of the other and all being **interchangeable.** For shipment these sections are put up in crates or packages of a convenient size for handling and transportation (look on opposite page). The solid sections are **interchangeable** with those containing windows and doors, so that a purchaser erecting a house can place the windows and doors to suit his requirements. The height of the sections is 7 feet 6 inches, which enables us to furnish our houses, when so desired, with Fancy Rail Porch (see page 23) or Porch without Fancy Rail or Post Brackets (see page 20). The lumber used in the construction of our houses is dressed on both sides, so that the interior of the house has a smooth and finished appearance, and can be treated with one coat of white shellac and one coat of varnish, or one coat of stain or wood dye, which will show to good effect the grain of the wood, thus giving an artistic finish at very little expense There are no ceilings in our houses, as the dressed roof panels take their place, thereby affording a better ventilation, and when gable windows are added, which can be opened and closed at will (see pages 15 and 21), a perfect ventilation can be had, without any danger of draught. These roof panels can be treated with varnish or stain the same as the side walls.

WINDOWS—The opening for the windows is 2 feet 5⅞ inches by 3 feet 3 inches. The sash is 1⅜-inch thick, 4-light, glazed with 12x16 glass, divided in the middle and rabbeted, so that each half will swing into the house and back against the side walls. They are hung with loose-joint wrought iron butts, half of the butt being attached to the sash, the other half to the window frame, so these parts cannot be lost in transit, and the windows can be easily and quickly adjusted in their proper positions.

DOORS—The doors are 2 feet 6 inches by 6 feet 2 inches, 1¾-inch thick, 5-paneled, complete with steel mortise lock and key, and hung with loose-joint wrought iron butts, half of the butt being attached to the door, the other half to the door frame, so these parts cannot be lost in transit, and the doors can be easily and quickly adjusted in their proper positions.

FLOORS—The floor is made in sections, of ⅞-inch matched pine, laid upon sized and fitted joists, which rest in iron stirrups attached to the sills.

ROOF—The roofs are of our new design, made of wood covered with a specially prepared tarred felt and a heavy duck or canvas, made to order for this purpose and thoroughly painted. They are made in sections easily handled, and when placed in position are tight and rain-proof. They are put up in crates for transportation.

PARTITIONS—The partitions extend from floor to roof, so that each room is entirely shut-off from the other. The upper part of the partition conforms to the shape of the roof, making a solid truss support for same. The lower part, which is in sections the height of side walls, can be removed and replaced at will. The doors of partitions are 5-paneled, and are complete with butts and latch.

NO NAILS—No nailing or carpenter work necessary. A screwdriver and wrench are all the tools required in erecting the houses.

NO CARPENTER—Anyone who follows our instructions can easily and quickly erect our houses. We send all purchasers printed illustrated instructions.

SCREENS—We furnish, when desired, wire screens fitted to the windows; also screen doors, complete with spring hinges (see pages 39 and 40).

OUTSIDE BLINDS—We also furnish outside blinds for the windows complete with fastenings (see pages 19, 23, 25 and 39).

WOODEN AWNINGS—Rain and sun protectors for over the windows and doors (see pages 15, 39 and 40).

We do not make any houses to exceed four panels in width (12 feet 8 inches), with one exception—our 05 4-room Bungalow, see page 20, but can make any length desired by simply adding more panels. **All of our houses are one story in height.** Do not overlook the most important feature in the construction of our houses, viz: THE VALUE IS ALWAYS THERE. Should you at any time desire to sell, you are not obliged to dispose of the land on which the house stands. You sell the house only. The purchaser simply takes it down section by section, without the slightest injury whatever to the house, and can erect it where he chooses; the house, after being erected by the purchaser, is in as good condition as before.

Very truly yours,

MERSHON & MORLEY CO.

M. & M. PATENTED PORTABLE HOUSES.

OUR Nos. 3 and 4 M. & M. Portable Automobile Houses are in good demand, and our customers are highly pleased with them. Our method of construction saves the purchaser a large percentage of what would be paid to a carpenter for building the same sized house of the same class of materials throughout. Not only this, but it does away with the annoyance of building. We ship these houses complete in every detail, and upon reaching their destination they can be erected ready for use in less than a day. If one is living in rented property and moves, the house can be taken down and re erected without the slightest injury to it. The weight of these houses is reduced to a minimum, and they can be taken to seaside or other resorts, where one might not find suitable accommodation for an automobile. These houses are made entirely of white pine, and primed outside with one coat of paint. The side walls are made in sections 3 feet 2 inches wide, from ¾-inch siding, tongued and grooved, each being a duplicate of the other and all being **interchangeable.** The height of the sections is 7 feet 8⅝ inches. From top of floor to point of gable inside is 11 feet 2 inches high. For shipment these sections are put-up in crates or packages of a convenient size for handling and transportation. The solid sections are **interchangeable** with those containing windows and doors. These houses have fancy shingle gables, fancy facial boards, and are ornamental.

WINDOW—The window in the front gable, as shown in the cuts on opposite page, have an opening 12 inches by 20 inches, with a 1⅛-inch thick 4-light sash, glazed with 8x16 glass, hung with loose-joint wrought iron butts, half of the butt being attached to the sash, the other half to the window frame, so these parts cannot be lost in transit, and the window can be easily and quickly adjusted in its proper position. The window swings into the house and back against the gable. If large windows for the walls of the house are desired, we merely substitute a window panel complete in place of the solid panel, at a small additional cost.

DOORS—The large double doors in the front end of the houses are hung with heavy iron hinges and furnished with hasp, hook and staple. The frame for these double doors is provided with a portable gang plank, made of hard wood and ironed, for running the vehicle in and out of the house. If regular 5-panel doors for the side walls or rear end of house are desired, we merely substitute a door panel complete in place of a solid panel, at a small additional cost.

FLOORS—The floors are made in sections, of ⅞-inch matched pine, laid upon sized and fitted joists, which rest in iron stirrups attached to the sills.

ROOF—The roof is of our new design, made of wood covered with a specially prepared tarred felt and a heavy duck or canvas, made to order for this purpose and thoroughly painted. They are made in sections easily handled, and when placed in position are tight and rain-proof. They are put-up in crates for transportation.

NO NAILS—No nailing or carpenter work necessary. A screwdriver and wrench are all the tools required.

NO CARPENTER—Anyone who follows our instructions can easily and quickly erect our houses. We send all purchasers printed illustrated instructions.

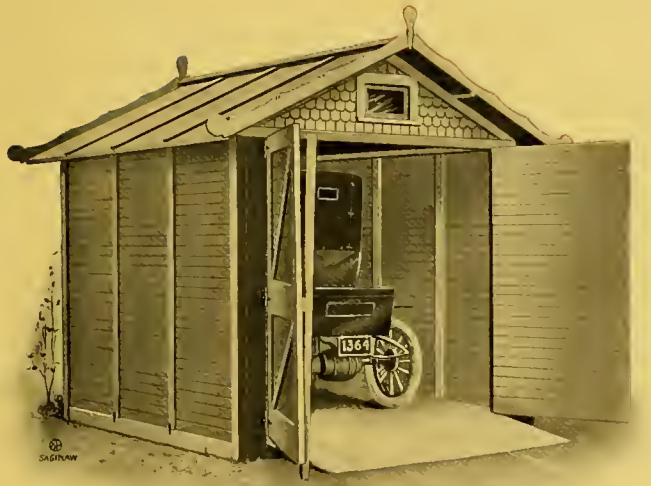
In naming quotation on these houses we regularly quote as follows:

No. 3 AUTOMOBILE HOUSE. Size, 9 feet 6 inches by 9 feet 6 inches; primed with one coat of paint outside; our new design of wooden roof, canvas-covered and painted, with specially prepared tarred felt between roof boards and canvas; 7-foot 8⅝ inches high side walls large double doors in front end (like shown in cut), fancy shingle gable, gable window, fancy facial boards, portable gang plank, and 6 iron plates to anchor sills to foundation.

No. 4 AUTOMOBILE HOUSE. Size, 9 feet 6 inches in width by 12 feet 8 inches in length; primed with one coat of paint outside; our new design of wooden roof, canvas-covered and painted, with specially prepared tarred felt between roof boards and canvas; 7-foot 8⅝ inches high side walls, large double doors in front end (like shown in cut), fancy shingle gable, gable window, fancy facial boards, portable gang plank, and 6 iron plates to anchor sills to foundation.

Should the purchaser desire a regular 4-light window panel in the side or rear end of either of these houses, or a regular 5-panel door in the side or rear end in place of a solid panel (see page 9), we can furnish the same at $3.08 each additional.

NOTICE—In your correspondence with us, please specify Catalogue No. 6.



No. 3 M. & M. Portable Automobile House. Size, 9 feet 6 inches by 9 feet 6 inches. Showing large Double Doors in the front, Fancy Shingle Gable, Gable Window, Fancy Facial Boards, and Portable Gang Plank. Side wall panels 7 feet 8⅝ inches high; opening for double doors, 7 feet 11 inches wide in the clear and 7 feet 7⅝ inches high in the clear; from top of floor to point of gable inside, 11 feet 2 inches high.

No. 4 M. & M. Portable Automobile House. Size, 9 feet 6 inches in width by 12 feet 8 inches in length. Showing large Double Doors in the front, Fancy Shingle Gable, Gable Window, Fancy Facial Boards, and Portable Gang Plank. Side wall panels 7 feet 8⅝ inches high; opening for double doors, 7 feet 11 inches wide in the clear and 7 feet 7⅝ inches high in the clear; from top of floor to point of gable inside, 11 feet 2 inches high.

Look on opposite page, 4, for full details; also note on the lower right-hand corner of same page what is embraced in our regular quotations on these houses, and also note at the bottom of the page the price for extra window or door panel, if these extras are desired.

OUR No. 5 M. & M. Portable Automobile House is in still greater demand than our Nos. 3 and 4, being 9 feet 6 inches in width by 15 feet 10 inches in length, which gives ample room for a touring car, work bench, shelving, etc. Our method of construction saves the purchaser a large percentage of what would be paid to a carpenter for building the same-sized house of the same class of materials throughout. Not only this, but it does away with the annoyance of building. We ship these houses complete in every detail, and upon reaching their destination they can be erected ready for use in a day. If one is living in rented property and moves, the house can be taken down and re-erected without the slightest injury to it. The weight of this house is reduced to a minimum, and it can be taken to seaside or other resorts, where one might not find suitable accommodation for an automobile. This house is made entirely of white pine, and primed outside with one coat of paint. The side walls are made in sections 3 feet 2 inches wide, from ¾-inch siding, tongued and grooved, each being a duplicate of the other and all being **interchangeable.** The height of the sections is 7 feet 8⅝ inches. From top of floor to point of gable inside, 11 feet 2 inches high. For shipment these sections are put-up in crates or packages of a convenient size for handling and transportation. The solid sections are **interchangeable** with those containing windows and doors. This house has fancy shingle gables, fancy facial boards, and is ornamental.

WINDOWS—The window in the front gable, as shown in the cut on opposite page, has an opening 12 inches by 20 inches, with a 1⅜-inch thick 1-light sash, glazed with 8x18 glass, hung with loose-joint wrought iron butts, half of the butt being attached to the sash, the other half to the window frame, so these parts cannot be lost in transit, and the window can be easily and quickly adjusted in its proper position. The window swings into the house and back against the gable.

The opening for the side wall windows is 2 feet 5¾ inches by 3 feet 3 inches. The sash is 1⅜-inch thick, 4-light, glazed with 12x16 glass, divided in the middle and rabbeted, so that each half will swing into the house and back against the side walls. They are hung with loose-joint wrought iron butts, half of the butt being attached to the sash, the other half to the window frame, so these parts cannot be lost in transit, and the windows can be easily and quickly adjusted in their proper positions.

DOORS—The large double doors in the front end of the house are hung with heavy iron hinges and furnished with hasp, hook and staple. The frame for these double doors is provided with a portable gang plank made of hard wood and ironed, for running the vehicle in and out of the house.

The 5-panel doors are 2 feet 6 inches by 6 feet 2 inches, 1⅜-inch thick, complete with steel mortise lock and key, and hung with loose-joint wrought iron butts, half of the butt being attached to the door, the other half to the door frame, so that these parts cannot be lost in transit, and the doors can be easily and quickly adjusted in their proper positions.

FLOOR—The floor is made in sections, of ⅞-inch matched pine, laid upon sized and fitted joists, which rest in iron stirrups attached to the sills, supported by blocking, as shown in our illustrated instructions for erecting our houses.

ROOF—The roof is of our new design, made of wood covered with a specially prepared tarred felt and a heavy duck or canvas, made to order for this purpose and thoroughly painted. They are made in sections easily handled, and when placed in position are tight and rain-proof. They are put-up in crates for transportation.

NO NAILS—No nailing or carpenter work necessary. A screwdriver and wrench are all the tools required.

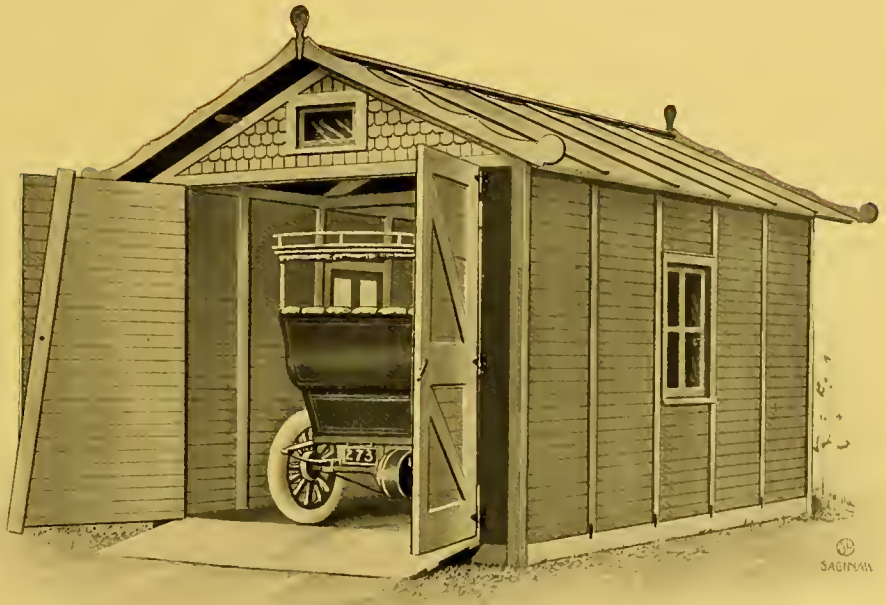
NO CARPENTER—Anyone who follows our instructions can easily and quickly erect the house. We send all purchasers printed illustrated instructions.

In naming quotation on this house we regularly quote as follows:

No. 5 AUTOMOBILE HOUSE. Size, 9 feet 6 inches in width by 15 feet 10 inches in length; primed with one coat of paint outside, our new design of wooden roof, canvas-covered and painted, with specially prepared tarred felt between roof board and canvas; 7-foot 8⅝ inches high side walls, large double doors in front end (like shown in cut), fancy shingle gable, gable windows, fancy facial boards, portable gang plank, 6 iron plates to anchor sills to foundation, 2 regular 4-light windows, one in each side of the house, and a regular 5-panel door in the rear end of house.

We can arrange this house so as to have large double doors on each end (see page 91, and place the regular 5-panel door in either side of the house, at an extra cost of $13.10.

NOTICE—In your correspondence with us, please specify Catalogue No. 6.



No. 5 M. & M. Portable Automobile House. Size, 9 feet 6 inches in width by 15 feet 10 inches in length. Showing large Double Doors in the front, Fancy Shingle Gable, Gable Window, Fancy Facial Boards, 2 regular 4-light Windows, one in each side of the house, and a Portable Gang Plank. Side wall panels 7 feet 8⅝ inches high; opening for double doors, 7 feet 11 inches wide in the clear and 7 feet 7⅝ inches high in the clear; from top of floor to point of gable inside, 11 feet 2 inches high.

Look on opposite page, 6, for full details; also note on the lower right-hand corner of same page what is embraced in our regular quotation on this house, and also note at the bottom of the page the price extra for double doors on both ends of the house if desired

Note—Cars with Limousine Body and Top Luggage Rail require a clearance 8 feet 6 inches high for the large doorway opening, which we furnish at a small additional cost.

M. & M. PATENTED PORTABLE HOUSES.

OUR No. 6 M. & M. Portable Automobile House is used when two or more machines are stabled under the same roof. It is 12 feet 8 inches in width by 22 feet 2 inches in length, with large double doors and gable window on each end, giving abundance of room for everything required in connection with the machines, work-bench, shelving, robe-rack, gasoline tank, &c., &c. Our method of construction saves the purchaser a large percentage of what would be paid to a carpenter for building the same-sized house of the same class of materials throughout. Not only this, but it does away with the annoyance of building. We ship these houses complete in every detail, and upon reaching their destination they can be erected ready for use in a day. If one is living in rented property and moves, the house can be taken down and re-erected without the slightest injury to it. The weight of this house is reduced to a minimum, and it can be taken to seaside or other resorts, where one might not find suitable accommodation for an automobile. This house is made entirely of white pine, and primed outside with one coat of paint. The side walls are made in sections 3 feet 2 inches wide, from ¾-inch siding, tongued and grooved, each being a duplicate of the other and all being **interchangeable.** The height of the sections is 7 feet 8⅝ inches. From top of floor to point of gable inside is 11 feet 7⅛ inches high. For shipment these sections are put-up in crates or packages of a convenient size for handling and transportation. The solid sections are **interchangeable** with those containing windows and doors. This house has fancy shingle gables, fancy facial boards, gable windows, and is very ornamental.

WINDOWS—The window in the front gable, as shown in the cut on opposite page, has an opening 21 inches by 20 inches, with a 1⅛-inch thick 4-light sash, glazed with 16x18 glass, hung with loose-joint wrought iron butts, half of the butt being attached to the sash, the other half to the window frame, so these parts cannot be lost in transit, and the window can be easily and quickly adjusted in its proper position.

The opening for the side wall windows is 2 feet 5⅞ inches by 3 feet 3 inches. The sash is 1⅛-inch thick, 4-light, glazed with 12x16 glass, divided in the middle and rabbeted, so that each half will swing into the house and back against the side walls. They are hung with loose-joint wrought iron butts, half of the butt being attached to the sash, the other half to the window frame, so these parts cannot be lost in transit, and the windows can be easily and quickly adjusted in their proper positions.

DOORS—The large double doors in the front and rear ends of the house are hung with heavy iron hinges and furnished with hasp, hook and staple. The frames for these double doors are provided with two portable gang planks made of hard wood and ironed, for running the vehicle in and out of the house.

The 5-panel door is 2 feet 6 inches by 6 feet 2 inches, 1⅛-inch thick, complete with steel mortise lock and key, and hung with loose-joint wrought iron butts, half of the butt being attached to the door, the other half to the door frame, so these parts cannot be lost in transit, and the door can be easily and quickly adjusted in its proper position.

FLOOR—The floor is made in sections, of ⅞-inch matched pine, laid upon sized and fitted joists, which rest in iron stirrups attached to the sills, supported by blocking, as shown in our illustrated instructions for erecting our houses.

ROOF—The roof is of our new design, made of wood covered with a specially prepared tarred felt and a heavy duck or canvas, made to order for this purpose and thoroughly painted. It is made in sections easily handled, and when placed in position is tight and rain-proof. Put-up in crates for transportation.

NO NAILS—No nailing or carpenter work necessary. A screwdriver and wrench are all the tools required.

NO CARPENTER—Anyone who follows our instructions can easily and quickly erect this house. We send all purchasers printed illustrated instructions.

In naming quotation on this house we regularly quote as follows:

No. 6 AUTOMOBILE HOUSE. Size, 12 feet 8 inches in width by 22 feet 2 inches in length; primed with one coat of paint outside, our new design of wooden roof, canvas-covered and painted, with specially prepared tarred felt between roof boards and canvas; 7-foot 8⅝ inches high side walls, large double doors in both ends of house (like shown in cut), fancy shingle gables, 2 gable windows, fancy facial boards 2 portable gang planks, 6 iron plates to anchor sills to foundation, 4 4-light windows, 2 in each side of the house, and a regular 5-panel door in the side of the house.

NOTICE—In your correspondence with us, please specify Catalogue No 6.

No. 6 M. & M. Portable Automobile House. Size, 12 feet 8 inches in width by 22 feet 2 inches in length; showing large Double Doors in front and rear, Fancy Shingle Gables, Gable Windows, Fancy Facial Boards and Portable Gang Planks, 4 regular 4-light windows, and 1 regular 5-panel door in the side of the house. Side wall panels 7 feet $8\frac{5}{8}$ inches high; openings for both double doors, 7 feet 11 inches wide in the clear and 7 feet $7\frac{5}{8}$ inches high in the clear; from top of floor to point of gable inside, 11 feet $7\frac{1}{2}$ inches high. Look on opposite page, 8, for full details; also note on the lower right-hand corner of same page what is embraced in our regular quotation on this house.

Note—Cars with Limousine Body and Top Luggage Rail require a clearance 8 foot 6 inches high for the large doorway openings, which we furnish at a small additional cost.

OUR No. 01 M. & M. Child's Portable Play House is artistic in design and very attractive on the lawn. It is 9 feet 6 inches in length by 6 feet 4 inches in width, 8 feet 9 inches from floor to point of gable inside of the house, made of a good quality of white pine, painted with one coat of white paint outside. The side wall panels are made in sections 3 feet 2 inches wide, from ¾-inch siding, tongued and grooved, each being a duplicate of the other and all being **interchangeable.** For shipment these sections are put-up in crates or packages of a convenient size for handling and transportation. The solid sections are **interchangeable** with those containing windows and doors, so that a purchaser erecting a house can arrange the windows and doors to suit his requirements. The height of the sections is invariably 6 feet 6 inches. We find one of the most acceptable ways of erecting the house is to put both the window and the door in front as shown in cut on this page, with a wooden awning over the door and one over the window, as rain and sun protectors. We frequently furnish one wooden awning for over the door and outside blinds for the window. The house, when completed, is strong, durable, wind and water-proof, reasonable in price, saving the purchaser much in the waste of time and materials, as well as all the annoyance of building.

WINDOWS—The opening for the windows is 2 feet 5¼ inches by 3 feet 3 inches. The sash is glazed with 2 lights 11x24 and 4 lights 5¾x8-inch glass, divided in the middle and rabbeted, so that each half will swing into the house and back against the walls. They are hung with loose-joint wrought iron butts, half of the butt being attached to the sash, the other half to the window frame, so these parts cannot be lost in transit, and the windows can be easily and quickly adjusted in their proper position.

DOOR—The door is 2 feet 6 inches by 5 feet 6 inches, 1¾-inch thick, 3-paneled, and a 9-light glazed sash, complete with steel mortise lock and key, and hung with loose-joint wrought iron butts, half of the butt being attached to the door, the other half to the door frame, so these parts cannot be lost in transit, and the door can be easily and quickly adjusted in its proper position.

FLOOR—The floor is made in sections, of ¾-inch matched pine, laid upon sized and fitted joists, which rest in iron stirrups attached to the sills.

ROOF—The roof is of our new design, made of wood covered with a specially prepared tarred felt and a heavy duck or canvas, made to order for this purpose and thoroughly painted. It is made in sections easily handled, and when placed in position is tight and rain-proof. Put-up in crates for transportation.

WOODEN AWNINGS—Rain and sun protectors for over the window and door. See cut on this page.

SCREENS—We furnish this house, when so desired, with wire screens fitted to the windows; also screen doors, complete with spring hinges, at a small extra cost. See pages 39 and 40.

NO NAILS—No nailing or carpenter work necessary. A screwdriver and wrench are all the tools required.

NO CARPENTER—Anyone who follows our instructions can easily and quickly erect this house. We send all purchasers printed illustrated instructions.

In naming quotation on this house we regularly quote as follows:

No. 01 CHILD'S PLAY HOUSE. Size, 6 feet 4 inches by 9 feet 6 inches; primed with one coat of white paint outside; one window, 1 door, our new design of wooden roof, canvas-covered and painted, with specially prepared tarred felt between roof boards and canvas; 6½-foot high side walls, fancy ridge board, 2 wooden awnings, one for over the window and one for over the door as shown in cut, 6 iron plates to anchor sills to foundation.

The number of doors and windows is a matter of choice. Should more windows or doors be desired, we merely substitute a door or window panel in place of the solid panel, at a small additional cost.

NOTICE—In your correspondence with us, please specify Catalogue No. 6.

No. 01 M & M. CHILD'S PORTABLE PLAY HOUSE. Size, 6 feet 4 inches wide by 9 feet 6 inches long, with 7½-foot side walls, Side Porch, with Fancy Rail, and Post Brackets. We can furnish this porch for one side, as shown in cut, one end only, one side and end, two ends and side, or around the entire house.

Look on page 10 for full details. This is the same house as shown on page 10 with these exceptions: 7½-foot high side walls and 3 sections of Fancy Rail Porch in place of the wooden awnings.

OUR No. 02 M. & M. Hunter's Cabin meets with a ready sale, for the reason that it is so perfectly adapted to the use of hunters and fishermen. With this house, regardless of weather, one can always be comfortable and free from the annoyance of insects. All the members of this Company are lovers of fishing and shooting, and can assure you that our Hunter's Cabin meets all the requirements, and is in every way practical. It is made entirely of white pine and primed with one coat of paint outside. Size of house, 9 feet 6 inches in length by 6 feet 4 inches in width; 9 feet 11 inches from top of floor to point of gable inside of house. The side walls are made in sections 3 feet 2 inches wide, from ¾-inch siding, tongued and grooved, each being a duplicate of the other, and all being **interchangeable**. For shipment these sections are put-up in crates or packages of a convenient size for handling and transportation. The solid sections are **interchangeable** with those containing windows and doors, so that a purchaser erecting a house can arrange the location of windows and doors to suit his requirements. The height of the sections is invariably 7 feet 6 inches. The total weight of the house, 1600 pounds. This house, when equipped with one of our Mershon & Morley Double Folding Portable Beds (see page 37), will accommodate two persons, with abundance of room during the day, when the beds are closed and not in use. The house requires very little more time to erect than a tent.

WINDOWS—The opening for the windows is 2 feet 5⅞ inches by 3 feet 3 inches. The sash is 1⅜-inch thick, 4-light, glazed with 12x16 glass, divided in the middle and rabbeted, so that each half will swing into the house and back against the side walls. They are hung with loose-joint wrought iron butts, half of the butt being attached to the sash, the other half to the window frame, so these parts cannot be lost in transit, and the windows can be easily and quickly adjusted in their proper positions. Opening for gable window, 21x20 inches, with a 1-light sash 1⅜-inch thick, glazed with 16x18-inch glass, hung with loose-joint wrought iron butts, and swings into the house back against the gable.

DOOR—The door is 2 feet 6 inches by 6 feet 2 inches, 1⅜-inch thick, 5-paneled, complete with steel mortise lock and key, and hung with loose-joint wrought iron butts, half of the butt being attached to the door, the other half to the door frame, so these parts cannot be lost in transit, and the door can be easily and quickly adjusted in its proper position.

FLOOR—The floor is made in 2 sections, of ⅞-inch matched pine, laid upon sized and fitted joists, which rest in iron stirrups attached to the sills.

ROOF—The roof is of our new design, made of wood covered with a specially prepared tarred felt and a heavy duck or canvas, made to order for this purpose and thoroughly painted. They are made in sections easily handled, and when placed in position are tight and rain-proof. They are put-up in crates for transportation.

GABLE—The gable is our fancy shingle, like shown on page 15.

SCREENS—We furnish this house, when so desired, with wire screens, fitted to the windows; also screen doors complete with spring hinges, at a small extra cost. See pages 39 and 40.

NO NAILS—No nailing or carpenter work necessary. A screwdriver and wrench are all the tools required.

NO CARPENTER Anyone who follows our instructions can easily and quickly erect this house. We send all purchasers printed illustrated instructions.

In naming quotation on this house we regularly quote as follows:

No. 02 HUNTER'S CABIN. Size, 6 feet 4 inches by 9 feet 6 inches, primed with one coat of paint outside, 1 window, 1 door, our new design of wooden roof, canvas-covered and painted, with specially prepared tarred felt between roof boards and canvas; 7½-foot high side walls, fancy shingle gables, galvanized iron roof-joint for stovepipe, 6 iron plates to anchor sills to foundation.

Should more doors or windows be desired, we merely substitute a door or window panel in place of the solid panel, at a small additional cost.

If window for gable is wanted it can be furnished, at a small additional cost.

We make this house with double roof and double walls at an extra cost (see p. 36

NOTICE—In your correspondence with us, please specify Catalogue No. 0.

No. 02 M. & M. PORTABLE HUNTER'S CABIN. Size, 9 feet 6 inches in length by 6 feet 4 inches in width. Showing two windows, one door, one gable window, and interchangeable side wall panels. Cabin equipped with Mershon & Morley's double folding portable bed (see page 37). The gable window and the window in the side of the house, and the M. & M. double folding portable bed, as shown in the above cut, are **extras.** Our regular quotation on this house specifies only one window and one door. The **extras** we furnish at an additional cost

Look on opposite page, No. 12, for full details; also note on the lower right-hand corner of same page what is embraced in our regular quotation on this house. The gables for this house are fancy shingle, like shown on page 15.

OUR No. 03 Portable Hunter's Cabin, Summer Kitchen, or one-room Cottage, meets with a ready sale, it being one of the best sellers in our entire line, as it can be used for many different purposes. It is made entirely of white pine and primed with one coat of paint outside. Size 9 feet 6 inches by 9 feet 6 inches; 10 feet from top of floor to point of gable inside of house. The side walls are made in sections 3 feet 2 inches wide, from ¾-inch siding, tongued and grooved, each being a duplicate of the other and all being **interchangeable.** For shipment these sections are put-up in crates or packages of a convenient size for handling and transportation. The solid sections are **interchangeable** with those containing windows and doors, so that a purchaser erecting a house can arrange the location of windows and doors to suit his requirements. The height of the sections is invariably 7 feet 6 inches. Total weight of the house 2000 pounds. This house, when equipped with two of our Mershon & Morley Double Folding Portable Beds (see page 37), will accommodate four persons, with plenty of room during the day, when the beds are closed and not in use. The house requires very little more time to erect than a tent.

WINDOWS—The opening for the windows is 2 feet 5⅞ inches by 3 feet 3 inches. The sash is 1⅛-inch thick, 4-light, glazed with 12x16 glass, divided in the middle and rabbeted, so that each half will swing into the house and back against the side walls. They are hung with loose-joint wrought iron butts, half of the butt being attached to the sash, the other half to the window frame, so these parts cannot be lost in transit, and the windows can be easily and quickly adjusted in their proper positions. Opening for gable window, 12x20 inches, with a 1-light sash 1⅛-inch thick, glazed with 8x16-inch glass, hung with loose-joint wrought iron butts, and swings into the house back against the gable.

DOOR—The door is 2 feet 6 inches by 6 feet 2 inches, 1¾-inch thick, 5-paneled, complete with steel mortise lock and key, and hung with loose-joint wrought iron butts half of the butt being attached to the door, the other half to the door frame, so these parts cannot be lost in transit, and the door can be easily and quickly adjusted in its proper position.

FLOOR—The floor is made in 3 sections, of ⅞-inch matched pine, laid upon sized and fitted joists, which rest in iron stirrups attached to the sills.

ROOF—The roof is of our new design, made of wood covered with a specially prepared tarred felt and a heavy duck or canvas, made to order for this purpose and thoroughly painted. They are made in sections easily handled, and when placed in position are tight and rain-proof. They are put-up in crates for transportation.

GABLE—The gable is our fancy shingle, like shown on page 15.

SCREENS—We furnish this house, when so desired, with wire screens, fitted to the windows; also screen doors complete with spring hinges, at a small extra cost. See pages 39 and 40.

NO NAILS No nailing or carpenter work necessary. A screwdriver and wrench are all the tools required.

NO CARPENTER—Anyone who follows our instructions can easily and quickly erect this house. We send all purchasers printed illustrated instructions.

In naming quotation on this house we regularly quote as follows:

No. 03 HUNTER'S CABIN. Size, 9 feet 6 inches by 9 feet 6 inches; primed with one coat of paint outside; 1 window, 1 door, our new design of wooden roof, canvas-covered and painted, with specially prepared tarred felt between roof boards and canvas; 7½-foot high side walls, fancy ridge board, fancy gable ornaments, galvanized iron roof-joint for stovepipe, 6 iron plates to anchor sills to foundation.

Should more doors or windows be desired, we merely substitute a door or window panel in place of the solid panel, at a small additional cost.

If window for gable is wanted it can be furnished, at a small additional cost.

We make this house with double roof and double walls at an extra cost (see p. 36)

NOTICE—In your correspondence with us, please specify Catalogue No. 6.

No. 03 M. & M. Portable Hunter's Cabin, Summer Kitchen, or One-Room Cottage. Size, 9 feet 6 inches by 9 feet 6 inches, showing wooden awnings over the window and door as rain and sun protectors. Fancy Ridge Board, Fancy Shingle Gables, Fancy Gable Ornaments and one-light Gable Window. The one-light gable window and wooden awnings as shown in the cut are **extras**, and not included in our regular quotation on this house; we furnish them at a small additional cost. We also furnish outside blinds for the window (see pages 19 and 39) in place of wooden awning, if desired, at a small additional cost. As a Summer Kitchen this house is just the thing; being entirely separate from the living room and bed rooms, does away with the heat from the stove and odor from the cooking. Three sections of our Fancy Rail Porch (see page 17) across the entire front side of this house adds very much to its appearance and comfort.

For full details regarding construction, etc., look on opposite page; also note on the lower right-hand corner of same page what is embraced in our regular quotation on the house.

OUR No. 04 M. & M. two-room cottage is very popular, owing to its size and moderate price. It is made entirely of white pine and primed with one coat of paint outside. Size of house, 15 feet 10 inches in length by 9 feet 6 inches in width, 10 feet from top of floor to point of gable inside of house, with one room 9 feet 6 inches by 9 feet 6 inches, and one room 9 feet 6 inches by 6 feet 4 inches. Two windows, two doors, one partition with door, and a galvanized iron roof-joint for stovepipe. The side walls are made in sections 3 feet 2 inches wide, from ¾-inch siding, tongued and grooved, each being a duplicate of the other, and all being **interchangeable.** For shipment these sections are put-up in crates or packages of a convenient size for handling and transportation. The solid sections are **interchangeable** with those containing windows and doors, so that a purchaser erecting the house can arrange the location of the windows and doors to suit his requirements. The height of the sections is 7 feet 6 inches. The house, when erected, is strong, durable, wind and water-proof, reasonable in price, saving the purchaser much in the waste of time and materials, as well as all the annoyance of building.

WINDOWS—The opening for the windows is 2 feet 5½ inches by 3 feet 8 inches. The sash is 1¾ inch thick, 4-light, glazed with 12x16 glass, divided in the middle and rabbeted, so that each half will swing into the house back against the side walls. They are hung with loose-joint wrought iron butts—half of the butt being attached to the sash, the other half to the window frame, so these parts cannot be lost in transit, and the windows can be easily and quickly adjusted in their proper positions.

DOORS—The doors are 2 feet 6 inches by 6 feet 2 inches, 1¾-inch thick, 5-paneled, complete with stock mortise lock and key, and hung with loose-joint wrought iron butts, half of the butt being attached to the door, the other half to the door frame, so these parts cannot be lost in transit, and the doors can be easily and quickly adjusted in their proper positions.

FLOOR—The floor is made in sections, of 2-inch matched pine, laid upon sized and fitted joists, which rest in iron stirrups attached to the sills.

ROOF—The roof is of our new design, made of wood covered with a specially prepared tarred felt and a heavy duck or canvas, made for or for this purpose and thoroughly painted. They are made in sections easily handled, and when placed in position are tight and rain-proof. They are put-up in crates for transportation.

PARTITION—The partition extends from floor to roof, so that each room is entirely shut-off from the other. The upper part of the partition conforms to the shape of the roof, making a solid truss-support for the same. The lower part, which is in sections the height of the side walls, can be removed and replaced at will. The door for partition is 5-paneled, complete with butts and latch.

NO NAILS—No nailing or carpenter work necessary. A screwdriver and wrench are all the tools required.

NO CARPENTER—Anyone who follows our instructions can easily and quickly erect the house. We send all purchasers printed illustrated instructions.

SCREENS—We furnish for this house, when desired, wire screens, fitted to the windows; also screen doors complete with spring hinges. See pages 39 and 40.

OUTSIDE BLINDS—We furnish for this house outside blinds for the windows complete with fastenings. See pages 19, 23, 25 and 29.

WOODEN AWNINGS—Rain and sun protectors. See pages 15, 23 and 40.

In naming quotation on this house we regularly quote as follows:

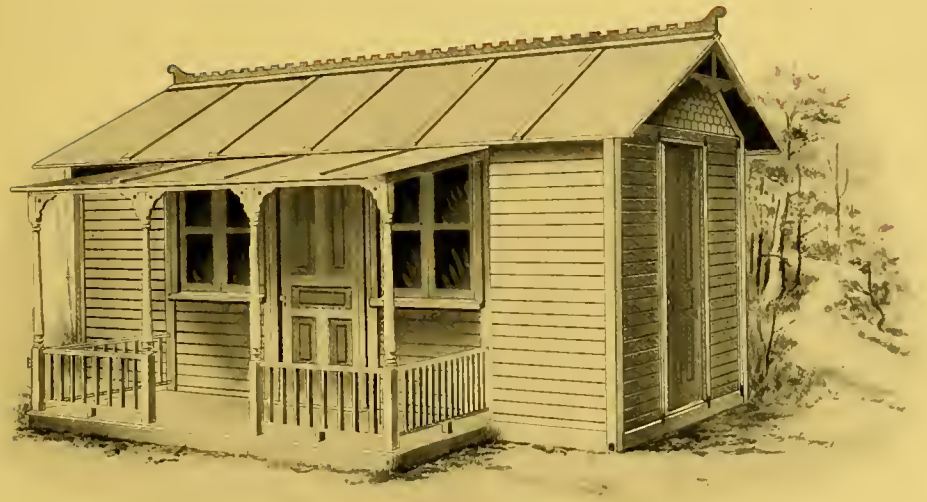
No. 04 2-ROOM COTTAGE. Size, 9 feet 6 inches by 17 feet 10 inches, primed with one coat of paint outside, 2 windows, 2 doors, 1 partition with door, our new design of wooden roof, canvas-covered and painted, with specially prepared tarred felt between roof boards and canvas; 7-foot side walls, fancy ridge board, fancy gable ornaments, galvanized iron roof-joint for stovepipe, 6 iron plates to anchor sills to foundation.

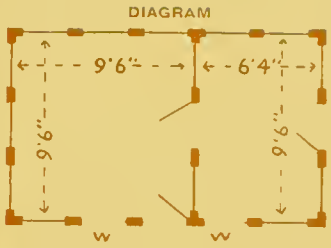
Should more windows or doors be desired, we merely substitute a door or window panel in place of the solid panel, at a small additional cost.

Wire screens for the windows, wire screen doors complete with spring hinges, wooden awnings, outside blinds, gable windows and M. & M. portable beds are **extras** and not included in our quotation on this house, unless so specified.

We make this house with double roof and double walls at an extra cost (see p. 36

NOTICE—In your correspondence with us, please specify Catalogue No. 6.





Scale, ⅛-inch to the foot.

The dotted lines give the dimensions of the rooms.

The heavy lines, thus, ——, show the exact positions of the side wall and partition panels.

No. 04 2-ROOM COTTAGE. Size, 9 feet 6 inches wide by 15 feet 10 inches long; with 3 sections of Fancy Rail Porch, with Post Brackets and Fancy Turned Posts across 3 panels of front side of the house.

A complete section of porch is 3 feet 2 inches long, or the width of the end and side wall panels of our houses, so the number of porch sections required will be the same as the number of end and side wall panels you wish to cover.

This is a beautiful 2-room cottage, strong, wind and water-proof. Price within the reach of everyone.

The 3 sections of Fancy Rail Porch are **extra**, and not included in our regular quotation on the house.

Look on opposite page, 16, for full details; also note on the lower right-hand corner of same page what is embraced in our regular quotation on this house.

OUR No. 05 M. & M. 3-room Cottage is more elaborate in design than our No. 04 2-room. It is made entirely of white pine and primed with one coat of paint outside. Size of house, 22 feet 2 inches in length by 12 feet 8 inches in width, 11 feet from top of floor to point of gable inside of house, with one room 12 feet 8 inches square, and two rooms 9 feet 6 inches by 6 feet 4 inches; 4 windows, 2 doors, 2 partitions with doors, and a galvanized iron roof-joint for stovepipe. The side walls are made in sections 3 feet 2 inches wide, from ¾-inch siding, tongued and grooved, each being a duplicate of the other and all being **interchangeable**. For shipment these sections are put-up in crates or packages of a convenient size for handling and transportation. The solid sections are **interchangeable** with those containing windows and doors, so that a purchaser erecting the house can arrange the location of the windows and doors to suit his requirements. The height of the sections is 7 feet 6 inches. The house, when erected, is strong, durable, wind and water-proof, reasonable in price, saving the purchaser much in waste of time and materials, as well as all the annoyance of building.

Our new design of 8-light gable windows is an improvement, and adds very much to the outside appearance of our cottages. See cut on opposite page. We furnish these new 8-light gable windows, when desired, at a small additional cost.

WINDOWS The opening for the windows is 2 feet 5⅞ inches by 3 feet 3 inches. The sash is 1⅛-inch thick, 4-light, glazed with 12x16 glass, divided in the middle and rabbeted, so that each half will swing into the house and back against the side walls. They are hung with loose-joint wrought iron butts, half of the butt being attached to the sash, the other half to the window frame, so these parts cannot be lost in transit, and the windows can be easily and quickly adjusted in their proper positions.

DOORS The doors are 2 feet 6 inches by 6 feet 2 inches, 1⅛-inch thick, 5-paneled, complete with steel mortise lock and key, and hung with loose-joint wrought iron butts, half of the butt being attached to the door, the other half to the door frame, so these parts cannot be lost in transit, and the doors can be easily and quickly adjusted in their proper positions.

FLOOR The floor is made in sections, of ⅞-inch matched pine, laid upon sized and fitted joists, which rest in iron stirrups attached to the sills.

ROOF—The roof is of our new design, made of wood covered with a specially prepared tarred felt and a heavy duck or canvas, made to order for this purpose and thoroughly painted. They are made in sections easily handled, and when placed in position are tight and rain-proof. They are put-up in crates for transportation.

PARTITIONS—The partitions extend from floor to roof, so that each room is entirely shut-off from the other. The upper part of the partition conforms to the shape of the roof, making a solid truss support for the same. The lower part, which is in sections the height of the side walls, can be removed and replaced at will. The doors for partitions are 5-paneled, complete with butts and latch.

NO NAILS No nailing or carpenter work necessary. A screwdriver and wrench are all the tools required.

NO CARPENTER—Anyone who follows our instructions can easily and quickly erect the house. We send all purchasers printed illustrated instructions.

SCREENS We furnish for this house, when desired, wire screens, fitted to the windows; also screen doors complete with spring hinges. See pages 39 and 40.

OUTSIDE BLINDS—We furnish for this house outside blinds for the windows, complete with fastenings. See pages 19, 23, 25 and 39.

WOODEN AWNINGS Sun and rain protectors for over windows and doors. See pages 15, 39 and 40.

In naming quotation on this house we regularly quote as follows:

No 05 3-ROOM COTTAGE. Size, 12 feet 8 inches by 22 feet 2 inches; primed with one coat of paint outside, 4 windows, 2 doors, 2 partitions with doors, our new design of wooden roof, canvas-covered and painted, with specially prepared tarred felt between roof boards and canvas; 7½-foot high side walls, fancy ridge board, fancy gable ornaments, galvanized iron roof-joint for stovepipe, 6 iron plates to anchor sills to foundation.

Should more doors or windows be desired, we merely substitute a door or window panel in place of the solid panel, at a small additional cost.

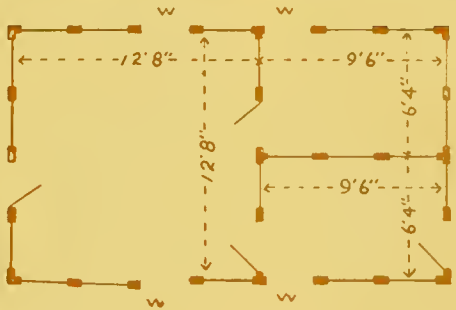
Wire screens for the windows, wire screen doors complete with spring hinges, wooden awnings, outside blinds, gable windows, and M. & M. folding beds are extras and not included in our quotation on this house unless so specified.

We make this house with double roof and double walls, at an extra cost (see p. 26).

NOTICE—In your correspondence with us, please specify Catalogue No. 6.

Our New 8-Light Gable Window.

DIAGRAM



Scale, $\frac{1}{8}$-inch to the foot.

The dotted lines give the dimensions of the rooms.

The heavy lines, thus, ——, show the exact positions of the side walls and partition panels.

No. 05 3-ROOM M & M. PORTABLE COTTAGE. Size, 12 feet 8 inches wide by 22 feet 2 inches long; one room 12 feet 8 inches by 12 feet 8 inches, two rooms 6 feet 4 inches by 9 feet 6 inches; showing Fancy Ridge Board, Fancy Gables, Fancy Gable Ornaments, and Outside Blinds; also our Fancy Rail Porch with Post Brackets and Fancy Turned Posts across front end of house (4 sections).

A complete section of porch is 3 feet 2 inches long, or the width of the end and side wall panels of our houses, so the number of porch sections required will be the same as the number of end and side wall panels you wish to cover.

We also show on this page our New 8-light Gable Window, which we furnish at a small additional cost.

The 4 sections of fancy rail porch and outside blinds are **extra** and not included in our regular quotation on this house.

The base or foundation for the porch and house, as shown above, consists of cedar posts 4 feet long by 6 inches in diameter, set 3 feet in the ground and ceiled with $\frac{7}{8}$-inch thick wainscoting, which we do not furnish, but we specify how to set the foundation posts in our Printed Illustrated Instructions for erecting our houses. We furnish our houses and porches complete and ready to set on the foundation. The steps as shown above we do not furnish; they are easily and quickly made after the house and porch has been erected.

Look on opposite page, 18, for full details; also note on the lower right-hand corner of same page what is embraced in our regular quotation on this house.

No. 05 3-ROOM M. & M. PORTABLE COTTAGE. Size, 12 feet 8 inches wide by 22 feet 2 inches long. Same house as shown and described on pages 18 and 19. Showing our 4-section Front End Porch without Fancy Rail and Post Brackets. We can furnish this style, if desired, at a less price than those with Fancy Rail and Post Brackets.

A complete section of porch is 3 feet 2 inches long, or the width of the end and side wall panels of our houses, so the number of porch sections required will be the same as the number of end and side wall panels you wish to cover.

The base or foundation for the porch and house, as shown above, consists of cedar posts 4 feet long by 6 inches in diameter, set 3 feet in the ground and ceiled with ⅞-inch thick wainscoting, which we do not furnish, but we specify how to set the foundation posts in our Printed Illustrated Instructions for erecting our houses. We furnish our houses and porches complete and ready to set on the foundation. The steps as shown above we do not furnish; they are easily and quickly made after the house and porch has been erected.

See cut of our New 8-light Gable Windows, upper right-hand corner of page 19, which we can furnish with the house at a small additional cost.

The porch as shown above is **extra** and not included in our regular quotation on this house. Look on page 18 for full details; also note on the lower right-hand corner of same page what is embraced in our regular quotation on this house.

No. 05 3-ROOM M. & M. PORTABLE COTTAGE. Size, 12 feet 8 inches wide by 22 feet 2 inches long, as shown and described on page 18 and 19; showing our 7-section Front Side Porch, with Fancy Rail, Post Brackets and Fancy Turned Posts, across the entire front side of house.

A complete section of porch is 3 feet 2 inches long, or the width of the end and side wall panels of our houses, so the number of porch sections required will be the same as the number of end and side wall panels you wish to cover.

The base or foundation for the porch and house, as shown above, consists of cedar posts 4 feet long by 6 inches in diameter, set 3 feet in the ground and ceiled with ⅞-inch thick wainscoting, which we do not furnish, but we specify how to set the foundation posts in our Printed Illustrated Instructions for erecting our houses. We furnish our houses and porches complete and ready to set on the foundation. The steps as shown above we do not furnish; they are easily and quickly made after the house and porch has been erected.

See our New 8-light Gable Window in gable end of house.

The porch and new 8-light gable window as shown are **extra** and not included in our regular quotation on this house. Look on page 18 for full details; also note on the lower right-hand corner of same page what is embraced in our regular quotation on this house.

OUR No. 05 4-room M. & M. Cottage is an ideal one for an inexpensive, comfortable, as well as ornamental summer resort home for the lake, seaside or mountains. It is made entirely of a good grade of white pine, and primed with one coat of paint outside. Size of house, 12 feet 8 inches in width by 31 feet 8 inches in length, with one room 12 feet 8 inches square, one room 12 feet 8 inches in width by 9 feet 6 inches in length, and two rooms 6 feet 4 inches in width by 9 feet 6 inches in length each. With 7½-foot side walls it is 11 feet from top of floor to point of gable inside of house.

We sell a great many of these for hunting, fishing and golf clubs. When used as such, the purchaser, as a rule, orders it with a porch around the entire house. See page 27.

This house is the same as the No. 05 3-room cottage in every detail as regards interchangeable side wall panels, roof, windows, doors, partitions floor, wooden awnings, outside blinds, screens, etc. For full particulars regarding its construction, see description of our No. 05 3-room cottage, p. 18.

In naming quotation on this house we regularly quote as follows:

No. 05 4-ROOM COTTAGE. Size, 12 feet 8 inches by 31 feet 8 inches, primed with one coat of paint outside, 8 windows, 2 doors, 3 partitions with doors, our new design of wooden roof, canvas covered and painted with specially prepared tarred felt between roof boards and canvas, 7½-foot side walls, fancy ridge board, fancy gable ornaments, galvanized iron roof-joint for stovepipe, 6 iron plates to anchor sills to foundation.

Should more windows or doors be desired, we merely substitute a window or door panel in place of a solid panel, at a small additional cost.

Think of it! This house can be erected in a day. No carpenter necessary. All the tools required for erecting the house are a screw-driver and wrench. All the annoyance of building saved; not only this, but a large percentage in cost of labor and materials.

We make this house with double roof and walls when so desired, at an additional cost. (See page 36).

DIAGRAM

Our New 8-Light Gable Window.

No 05 6-ROOM M. & M. PORTABLE COTTAGE. Size, 12 feet 8 inches wide by 41 feet 2 inches long, with four rooms 6 feet 4 inches by 9 feet 6 inches, one room 12 feet 8 inches by 9 feet 6 inches, and one room 12 feet 8 inches square. Showing our 34-section Fancy Rail Porch with Post Brackets and Fancy Turned Posts around the entire house.

A complete section of porch is 3 feet 2 inches long, or the width of the end and side wall panels of our houses, so the number of porch sections required will be the same as the number of end and side wall panels you wish to cover.

The base or foundation for the porch and house, as shown above, consists of cedar posts 4 feet long by 6 inches in diameter, set 3 feet in the ground and ceiled with ⅜-inch thick wainscoting, which we do not furnish, but we specify how to set the foundation posts in our Printed Illustrated Instructions for erecting our houses. We furnish our houses and porches complete and ready to set on the foundation. The steps as shown above we do not furnish; they are easily and quickly made after the house and porch has been erected.

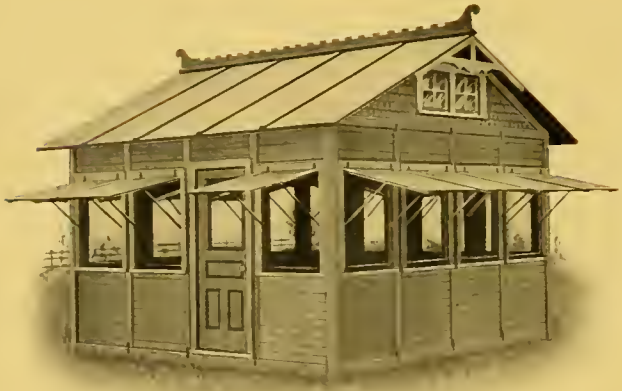
We also show on this page cut of our New 8-light Gable Window.

The porch and 8-light gable windows are **extra** and not included in our regular quotation on this house. Look on opposite page, 26, for full details; also note on the left-hand side of the page what is embraced in our regular quotation on this house.

FIGHT THE "WHITE PLAGUE" WITH FRESH AIR.

"IT is an outrageous shame that so many people die needlessly of Tuberculosis. Tuberculosis is generally nothing short of suicide. People coop themselves up in the stuffy, vitiated air of living rooms all day and night and then wonder why the "white plague" slowly chokes them to death. Get out into the fresh air that God gave you! You have no excuse for breathing poison when for a few dollars modern devices make it possible to fill your lungs with the breath of life."—*From Dr. Baker's address to tubercular patients.*

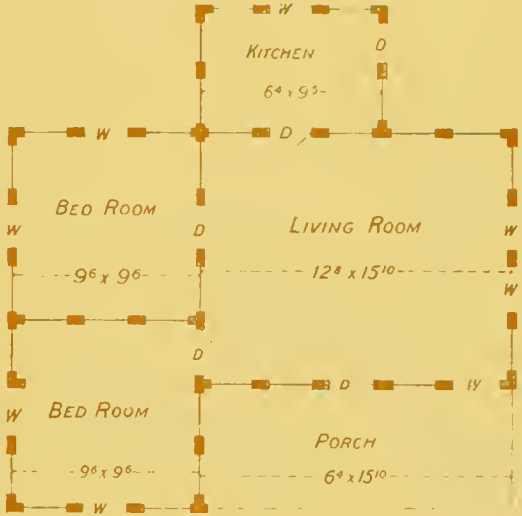
Strong language, but it's the downright truth. The **No. 05 M. & M. Portable Open-Air Cottage** for tuberculous patients is just such a device as Dr. Baker referred to. It is as movable as a tent, and as comfortable as a house. It does not require you to go to the expense of changing climate, and yet is always filled with pure air of "God's out-of-doors." Every progressive physician should be informed on the detail talking points of this portable cottage.



OPEN.

CLOSED.

No. 05 M. & M. Portable Open-Air Cottage, for tuberculous patients. 12 feet 8 inches by 12 feet 8 inches; 7 feet 6 inches high side walls; 11 feet from top of floor to point of gable inside of house. Each side and end wall panel with the exception of the door panel has an opening 2 feet 2 inches by 3 feet 3 inches. This opening is provided with a solid wood lea section to correspond with the surface of the remainder of the wall panel, and hung with wrought iron hinges at the top, supported with wrought iron arms at the sides, so that it may be opened or closed, as shown in the above cuts. The openings or windows are furnished with wire screens complete with fastenings, which raise and lower from the inside of the house. The upper part of the door has a one-light sash glazed with a light of 22-inch by 34-inch double-strength glass, which swings into the house when opened. The opening in the door is screened with wire cloth. Both gable ends of the house have our new 8-light tilting windows, which, when opened, swing into the house. These gable window openings are provided with wire screens complete with fastenings, so at all times the occupant is protected from flies and insects. Not only this, but, with a good water-tight roof and matched pine floor, is dry and comfortable, with an abundance of light and fresh air. In case of a rain or wind storm the openings toward the approaching storm may be closed from the inside of the house at a moment's warning. We also provide a galvanized iron roof-joint for a stovepipe. We build this house any length desired and partition it off to suit the requirements of our customer, but we do not make the house to exceed four panels, or 12 feet 8 inches, in width. **For Comfort, Cheapness and Durability** this house is unsurpassed.



Scale, ½ inch to the foot.
The dotted lines give the dimensions of the rooms.
The heavy lines, thus, ——, show the exact positions of the side wall and partition panels.

No. 05 4-room Portable Bungalow, 19 feet wide by 25 feet 4 inches long; 7 feet 8⅝ inches high side walls; with our Fancy Rail Porch with Post Brackets and Fancy Turned Posts. You will note the floor plans of this Bungalow, shown on this page, give a large living room, 12 feet 8 inches wide by 15 feet 10 inches long; 2 Bed Rooms 9 feet 6 inches square, a Kitchen 6 feet 4 inches wide by 9 feet 6 inches long, and a Porch 6 feet 4 inches wide by 15 feet 10 inches long.

The base and foundation for the porch and house as shown above consists of cedar posts 4 feet long by 6 inches in diameter, set 3 feet in the ground, covered with lattice work made of 2-inch by ¾-inch pine strips, **which we do not furnish.** But we specify how to set the foundation posts in our printed Illustrated Instructions for erecting our houses. We furnish this house and porch complete and ready to set on the foundation. The steps as shown above **we do not furnish;** they are quickly made after the house and porch have been erected.

In naming quotation on this house we regularly quote as follows:

No. 05 4-room Bungalow, 19 ft. by 25 ft. 4 in.; primed with one coat of paint outside; 8 windows, 2 doors, 3 partitions and 3 partition doors giving Two Bedrooms, 9 ft. 6 in. by 9 ft. 6 in.; Living Room, 12 ft. 8 in. by 15 ft. 10 in.; Kitchen, 6 ft. 4 in. by 9 ft. 6 in.; Porch, 6 ft. 4 in. by 15 ft. 10 in. Our new design of single wooden roof, canvas covered and painted, with specially prepared tarred felt between roof boards and canvas. Side walls for main upright, 7 ft. 8⅝ inches high; Fancy Ridge Board, Fancy Gable Ornaments; our new 8-light Gable Windows in each gable end of the house; 2 Galvanized Iron Roof Joints for stove pipe, one for living room and one for kitchen; 8 iron plates to anchor sills to foundation.

We make this house with **Double Roof and Single Walls** and **Double Roof and Double Walls** when so desired, at an extra cost. See page 36 for full description of our Double Roof and Double Wall Houses. We also furnish this house with wire screens for windows and doors, and outside blinds when so desired, at small extra cost.

M. & M. PATENTED PORTABLE HOUSES.

OUR No. 05 3 room M. & M. Portable Photograph Gallery is complete in all its details, inexpensive, comfortable and ornamental. Can be easily transported from one location to another by rail, water or wagon. It is made of a good grade of white pine, and primed with one coat of paint outside. Size, 12 feet 8 inches in width by 22 feet 2 inches in length, with 7½-foot side walls, and is 11 feet from floor to point of gable inside of the gallery. The Reception Room, as shown in diagram (page 31), is 12 feet 8 inches in width by 9 feet 6 inches in length. The Operating Room is 12 feet 8 inches square, with a Dark Room 3 feet 2 inches in width by 6 feet 4 inches in length, in one corner. The side walls are made in sections 3 feet 2 inches in width, from ⅜-inch siding, tongued and grooved, each being a duplicate of the other and all being **interchangeable**. For shipment these sections are put up in crates or packages of a convenient size for handling and transportation. The solid sections are **interchangeable** with those containing windows and doors, so that the purchaser erecting the house can arrange the location of the windows and doors to suit his requirements. This Gallery, when erected, is strong, durable, wind and water-proof.

SHOW WINDOW—The show window is composed of two window panels, each panel having an opening 2 feet 5⅞ inches by 3 feet 3 inches, each sash for same being 1⅜-inch thick, glazed with one light 26x34 double-strength glass. Inside, attached to these two window panels by hinges, is a wooden shelf 20 inches in width by 6 feet in length, resting on swing brackets, which may be used for show window display, and when not in use this shelf may be dropped by swinging the brackets in against the window panels.

WINDOWS—The opening for the windows is 2 feet 5⅞ inches by 3 feet 3 inches. The sash is 1⅜-inch thick, 4-light, glazed with 12x16 glass, divided in the middle and rabbeted, so that each half will swing into the house and back against the side walls. They are hung with loose-joint wrought iron butts, half of the butt being attached to the sash, the other half to the window frame, so these parts cannot be lost in transit, and the windows can be easily and quickly adjusted in their proper positions.

DOORS—The doors are 2 feet 6 inches by 6 feet 2 inches, 1⅜-inch thick, 5-paneled, complete with steel mortise lock and key, and hung with loose-joint wrought iron butts, half of the butt being attached to the door, the other half to the door frame, so that these parts cannot be lost in transit, and the doors can be easily and quickly adjusted in their proper positions.

FLOOR—The floor is made in sections, of ⅞-inch matched pine, laid upon sized and fitted joists, which rest in iron stirrups attached to the sills.

ROOF—The roof is of our new design, with specially prepared tarred felt between the roof boards and canvas, made of wood, covered with canvas and thoroughly painted. Made in sections in sizes easily handled, and when placed in position are tight and rain-proof. They are put-up in crates for transportation.

PARTITIONS—The partitions extend from floor to roof, so that each room is entirely shut-off from the other. The upper part of the partition conforms to the shape of the roof, making a solid truss support for the same. The lower part, which is in sections the height of the side walls, can be removed and replaced at will. The doors for partitions are 5-paneled, complete with butts and latch.

TOP OR ROOF SKYLIGHT—This skylight is 9 feet 6 inches in width by 7 feet 4 inches in length, extending from the wall-plate to the ridge board on one side of the roof; the sash is made for glass 16 inches wide. We do not furnish this skylight glazed. We furnish it complete (except the glass) ready for glazing.

SIDELIGHT—The sidelight is 9 feet 6 inches in width by 4 feet 6 inches in height, with three 6-light sash glazed with 13x16 glass, which we furnish complete.

NO NAILS—No nailing or carpenter work necessary. A screwdriver and wrench are all the tools required.

NO CARPENTER—Anyone who follows our instructions can easily and quickly erect this gallery. We send all purchasers printed illustrated instructions.

SCREENS—We can furnish for this gallery, when desired, wire screens, fitted to the windows; also screen doors complete with spring hinges. See pages 39 and 40.

OUTSIDE BLINDS—We can furnish for this gallery outside blinds for the windows, complete with fastenings. See page 39.

WOODEN AWNINGS—Rain and sun protectors. We can furnish these as shown on pages 39 and 40.

M. & M. PORTABLE FOLDING BEDS—We can furnish these as shown on pages 37 and 38, when desired.

In naming quotation on this gallery we regularly quote as follows:

No. 05 3-ROOM M. & M. PORTABLE PHOTOGRAPH GALLERY. Size, 12 feet 8 inches by 22 feet 2 inches; primed with one coat of paint outside, 2 windows, 2 show windows and display shelf, 2 doors, 1 partition with door, 1 dark-room 3 feet 2 inches by 6 feet 4 inches, with door and red-light window; fancy ridge board, fancy gable ornaments, galvanized iron roof-joint for stovepipe, top or roof skylight 9 feet 6 inches in width by 7 feet 4 inches in length, *unglazed;* sidelight 9 feet 6 inches in width by 4 feet 6 inches in height, with three 6-light sash, glazed with 13x16 glass; one double show window, glazed with two lights of 26x34 double-strength glass, and swing bracket shelf, complete with hinges and brackets, 20 inches in width by 6 feet in length, 6 iron plates to anchor sills to foundation.

Should more windows and doors be desired, we merely substitute a window or door panel in place of the solid panel, at a small additional cost.

Wire screens for the windows, wire screen doors complete with spring hinges, wooden awnings, outside blinds, gable windows, and folding beds are **extras** and not included in our quotation on this gallery unless so specified.

We make this gallery with double roof and double walls, at an extra cost (see page 36).

Should a larger gallery be needed, we can increase the length by adding more panels, but not the width, as 12 feet 8 inches is as wide as we manufacture them.

NOTICE—In your correspondence with us, please specify Catalogue No. 6.

Our New 8-Light Gable Window.

DIAGRAM.

Scale, ⅛-inch to the foot.
The dotted lines give the dimensions of the rooms

The heavy lines, thus, ——— show the exact position of the side wall and partition panels.

Reception room—12 feet 8 inches in width by 9 feet 6 inches in length.

Operating Room—12 feet 8 inches square, with a Dark Room 3 feet 2 inches by 6 feet 4 inches, in corner.

Top or Roof Skylight—9 feet 6 inches width by 7 feet 4 inches length.

Sidelight—9 feet 6 inches in width by 4 feet 6 inches in height.

Show Windows, with drop display shelf.

No. 05 3-ROOM M. & M. PORTABLE PHOTOGRAPH GALLERY. Size, 12 feet 8 inches wide by 22 feet 2 inches long. Look on opposite page, 30, for full details; also note on the right-hand lower corner of same page what is embraced in our regular quotations on this gallery.

We also show at the top of this page our new 8-light Gable Window, which we furnish at a small additional expense.

The Top or Roof Skylight fits on either side of the roof; the Sidelight fits on either side of the gallery.

OUR No. 03 Fruit and Confectionery Stand is a good seller and very reasonable in price. On arrival at destination it can be erected in three hours and ready for business. When shipped from our factory it is complete in all its details, including front counter. It is 9 feet 6 inches wide by 9 feet 6 inches long, made entirely of white pine, primed with one coat of paint outside. It is 10 feet from floor to point of gable inside of house. The side walls are made in sections 3 feet 2 inches wide, of ¾-inch siding, tongued and grooved, each being a duplicate of the other and all being **interchangeable**. For shipment these sections are put-up in crates or packages of convenient size for handling and transportation. The solid sections are **interchangeable** with those containing windows and doors, so that the purchaser erecting a stand can arrange the location of the windows and doors to suit his requirements. The side wall panels are 7 feet 6 inches high. Total weight of the stand, about 1600 pounds. The wooden awning for the side opening is hung with heavy strap hinges, and supported, when opened, with Sargent's patent adjustable scuttle fasteners, so that it may be adjusted to different heights. The awning, when opened, extends out from the side wall of the stand 4 feet 4½ inches, and its outer edge is 6 feet 4 inches above the floor line, giving ample room for pedestrians to pass under. Size of the awning opening is 3 feet 5½ inches high by 9 feet 2¼ inches long. The counter is 2 feet 10 inches above the floor line, is 2 feet wide by 9 feet 4¼ inches long, and is hung on swing brackets so it can be raised or lowered at will. The outside of the awning is covered with canvas and specially prepared tarred felt, same as the roof, and is thoroughly painted and rain-proof. A sign may be painted on the outside of the awning, if desired, for advertising purposes.

A gable window may be placed in either or both ends, at a small additional expense, with an 8x16 one-light sash, to swing into the stand, which may be fitted with glass or wire screen. We can also put a light of heavy galvanized screen wire 21¼ inches wide by 29 inches long in the upper part of the door in place of solid wooden panels.

DOOR—The door is 2 feet 6 inches by 6 feet 2 inches, 1⅜-inch thick, 5-paneled, complete with steel mortise lock and key, and hung with loose-joint wrought iron butts, half of the butt being attached to the door, the other half to the door frame, so these parts cannot be lost in transit, and the door can be easily and quickly adjusted in its proper position.

FLOOR—The floor is made in 3 sections, of ⅞-inch matched pine, laid upon sized and fitted joists, which rest in iron stirrups attached to the sills.

ROOF—The roof is of our new design, made of wood covered with a specially prepared tarred felt and a heavy duck or canvas, made to order for this purpose and thoroughly painted. It is made in sections easily handled, and when placed in position is tight and rain-proof. Put-up in crates for transportation.

NO NAILS—No nailing or carpenter work necessary. A screwdriver and wrench are all the tools required.

NO CARPENTER—Anyone who follows our instructions can easily and quickly erect our houses. We send all purchasers printed illustrated instructions.

The cut of this stand shows one 5-panel door and awning, no windows. The number of doors and windows is a matter of choice.

In naming quotation on this stand we regularly quote as follows:

STAND. 9 feet 6 inches by 9 feet 6 inches, primed with one coat of paint outside, 1 door, our new design of wooden roof, canvas-covered and painted, with specially prepared tarred felt between roof boards and canvas; 7½-foot side walls, galvanized iron roof-joint for stovepipe, counter 2 feet wide by 9 feet 4¼ inches long, hung on swing brackets, wooden awning 3 feet 5½ inches high by 9 feet 2¼ inches long, canvas-covered and painted, hung with heavy strap hinges, and Sargent's patent adjustable steel scuttle fasteners.

Should more windows or doors be desired, we merely substitute a door or window panel in place of the solid panel, at a small additional cost.

NOTICE—In your correspondence with us, please specify Catalogue No. 6

No. 03 M. & M. Fruit and Confectionery Stand. Size, 9 feet 6 inches by 9 feet 6 inches. If desired, we can increase the length of this stand to 15 feet 10 inches, and partition off a room 6 feet 4 inches long by 9 feet 6 inches wide.

Look on opposite page, 32, for full description, and also note on the lower right-hand corner of same page what is embraced in our regular quotation on this stand.

OUR No. 05 Fruit and Confectionery Stand is constructed in the same manner as is our No. 03, only it is much larger in every way. It is 12 feet 8 inches wide by 22 feet 2 inches long, and divided into two rooms, the salesroom being 12 feet 8 inches wide by 15 feet 10 inches long, the stockroom 6 feet 4 inches long by 12 feet 8 inches wide (see diagram, upper right-hand corner of page 35). The stockroom may be also used as a bedroom by using one of our M. & M. Folding Portable Beds (see pages 37 and 38 of this Catalogue). They are designed to be set up in the corner, so the end or the side wall of the room will form the headboard, thus keeping the pillows in place. By referring to pages 37 and 38 it will be seen how convenient for sweeping and cleaning the floor when the beds are closed.

The stand, on arrival at destination, can be erected in a very few hours and ready for business. When shipped from our factory it is complete in all its details, including front counter. It is 12 feet 8 inches wide by 22 feet 2 inches long, divided into two rooms as above described, made entirely of white pine, primed with one coat of paint outside. It is 11 feet from floor to point of gable inside of the stand. The side walls are made in sections 3 feet 2 inches wide, of ⅝-inch siding, tongued and grooved, each being a duplicate of the other and all being **interchangeable.** For shipment these sections are put up in crates or packages of a convenient size for handling and transportation. The solid sections are **interchangeable** with those containing windows and doors, so that the purchaser erecting a stand can arrange the location of the windows and doors to suit his requirements. The side wall panels are 7 feet 6 inches high. Total weight of the stand, about 4200 pounds. The wooden awnings for the side opening are hung with heavy strap hinges and supported, when opened, with Sargent's patent adjustable scuttle fasteners, so that they may be adjusted to different heights. The awnings, when opened, extend out from the side wall of the stand 4 feet 4½ inches, and their outer edge is 6 feet 4 inches above the floor line, giving ample room for pedestrians to pass under. Size of awning openings is 3 feet 5½ inches high by 6 feet ½-inch long and 3 feet 5½ inches high by 9 feet 2¼ inches long. The counter is 2 feet 10 inches above the floor line, is 2 feet wide by 15 feet 9 inches long, and is hung on swing brackets, so it can be raised or lowered at will. The outside of the awnings is covered with canvas and specially prepared tarred felt, same as the roof, and thoroughly painted and rain-proof. A sign may be painted on the outside of the awning, if desired, for advertising purposes.

Our new 8-light gable window (see cut of same, upper left-hand corner, page 35) may be placed at either or both ends at a small additional expense, with two 4-light sash, to swing into the stand, which may be fitted with glass or wire screen. We can also put a light of heavy galvanized screen wire 21¼ inches wide by 29 inches long, in the upper part of the door in place of the solid wooden panels.

DIAGRAM

WINDOW—The opening for the window is 2 feet 5¾ inches by 3 feet 3 inches. The sash is 1¾-inch thick, 4-light, glazed with 12x16 glass, divided in the middle and rabbeted, so that each half will swing into the house and back against the side walls. It is hung with loose-joint wrought iron butts, half of the butt being attached to the sash, the other half to the window frame, so these parts cannot be lost in transit, and the window can be easily and quickly adjusted in its proper position.

DOOR—The door is 2 feet 6 inches by 6 feet 2 inches, 1¾-inch thick, 5-paneled, complete with steel mortise lock and key, and hung with loose-joint wrought iron butts, half of the butt being attached to the door, the other half to the door frame, so these parts cannot be lost in transit, and the door can be easily and quickly adjusted in its proper position.

FLOOR—The floor is made in sections, of 7-inch matched pine, laid upon sized and fitted joists, which rest in iron stirrups attached to the sills.

ROOF—The roof is of our new design, made of wood covered with a specially prepared tarred felt and a heavy duck or canvas, made for or for this purpose and thoroughly painted. They are made in sections easily handled, and when placed in position are tight and rain-proof. They are put up in crates for transportation.

PARTITION—The partition extends from floor to roof, so that each room is entirely shut-off from the other. The upper part of the partition conforms to the shape of the roof, making a solid truss support for same. The lower part, which is in sections the height of side walls, can be removed and replaced at will. The door for partitions is 5-paneled, and complete with butts and latch.

NO NAILS—No nailing or carpenter work necessary. A screwdriver and wrench are all the tools required.

NO CARPENTER—Anyone who follows our instructions can easily and quickly erect the house. We send all purchasers printed illustrated instructions.

The cut of this stand shows one 5-panel door, awnings and one window. The number of doors and windows is a matter of choice.

In naming quotation on this stand we regularly quote as follows:

STAND. 12 feet 8 inches wide by 22 feet 2 inches long, primed with one coat of paint outside, 1 window, 1 door, 1 partition with door, our new design of wooden roof, canvas-covered and painted, with specially prepared tarred felt between roof boards and canvas; 11-foot side walls, galvanized iron roof-joint for stovepipe, counter 2 feet wide by 15 feet 9 inches long, hung on swing brackets; 1 wooden awning 3 feet 5½ inches high by 6 feet ½-inch long, 1 wooden awning 3 feet 5½ inches high by 9 feet 2¼ inches long, canvas-covered and painted, hung with heavy strap hinges and Sargent's patent adjustable steel scuttle fasteners.

Should more windows or doors be desired, we merely substitute a door or wiudow panel in place of the solid panel, at a small additional cost.

NOTICE—In your correspondence with us, please specify Catalogue No. 6.

Our New 8-Light Gable Window.

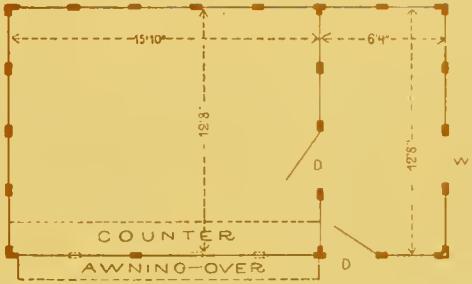


DIAGRAM.

Scale, $\frac{1}{8}$-inch to foot.

The dotted lines give the dimensions of the rooms.

The heavy lines, thus, ▬▬▬, show the exact positions of the side wall and partition panels.

No. 05 M. & M. Fruit and Confectionery Stand. Size, 12 feet 8 inches wide by 22 feet 2 inches long. (For full description see opposite page, 34).

Double Roof and Double Wall Houses.

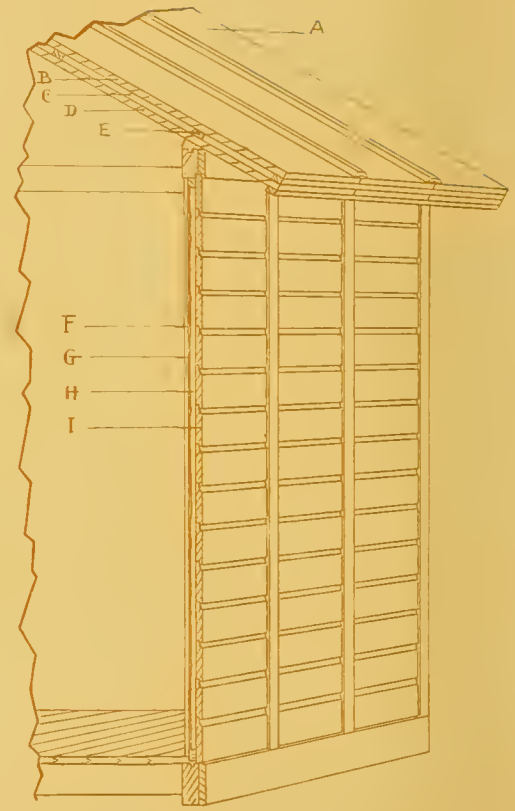
WHERE a house is desired for occupancy the year around, or in a country subject to extremes of temperature, either hot or cold, our **double roof** and **double wall** house meets every requirement. That you may clearly understand the construction of a double roof and double wall house, we show on this page a sectional view illustrating same.

Double Roof—It is constructed with outside and inside panels, each being made of ¾-inch matched white pine, and separated by a ⅞-inch air space, as shown in the cut. The upper or weather surface of the outside panels is covered with specially prepared tarred felt and heavy canvas, made to our order for this purpose and thoroughly painted. "A" represents the painted canvas covering and specially prepared tarred felt, "B" the outside panels, "C" the ⅞-inch air space, "D" the inside panels, "E" the cleats separating and staying the upper and lower panels.

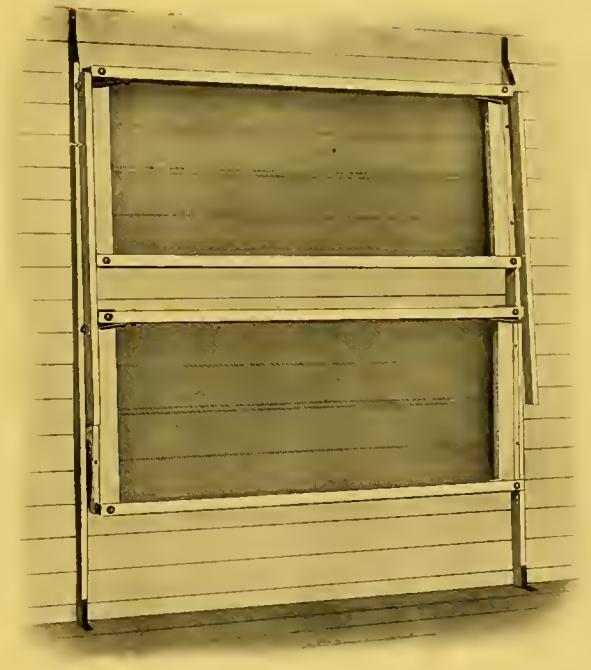
Double Walls—The outside or weather panels are made of ¾-inch white pine siding, tongued and grooved; the inside panels are made of ½-inch white pine siding, tongued and grooved, breaking joints with the outside panels, so that the inside and outside joints do not come opposite each other. Between the outside and inside panels there is a ⅞-inch air space, which is lined with the best grade of moisture-proof building paper, which makes the sides of the house absolutely **wind** and **weather-proof**. "F" represents the inside panels, "G" the moisture-proof paper lining, "H" the ⅞-inch air space, "I" the outside panels of the double walls.

For Extreme Heat Only—When protection is desired from extreme heat only, a **double** roof and **single** wall house will meet all requirements.

NOTICE—In your correspondence with us, please specify Catalogue No. 6.



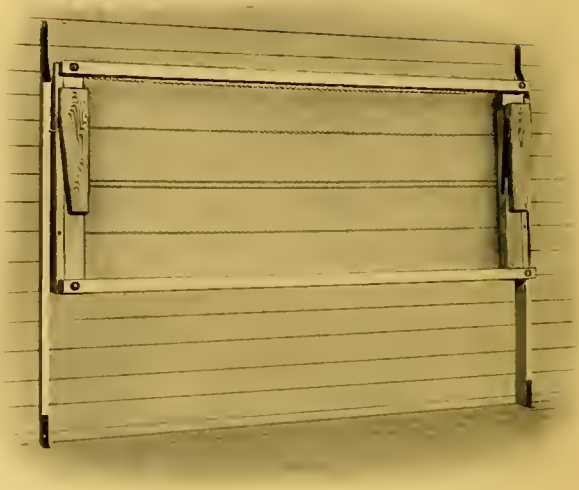
OPEN.



CLOSED.

M. & M. Double Folding Portable Beds. To utilize room to the best advantage in the hunter's cabin or the summer cottage is at times very perplexing as well as annoying, especially for sleeping accommodations In this respect the Mershon & Morley Portable Folding Bed has come to the rescue. The frame work of the bed is made of well seasoned hard wood, securely ironed and bolted at the four corners in such a manner as to allow the frame to be opened or closed at will. The frame is equipped with portable head and foot boards for each bed, two wire mattresses 6 feet long by 30 inches wide, one for upper part of frame and one for the lower. The frame is made to fasten to the side wall of our houses by means of 6 screws, and when closed and not in use projects only 6 inches into the room, so the occupant can have the entire floor space during the day. You are not obliged to remove the bedding when you close them up. These beds accommodate two persons (see Hunter's Cabin, page 13). Note how convenient for sweeping the floor when the beds are closed, besides making room for chairs and table.

OPEN.

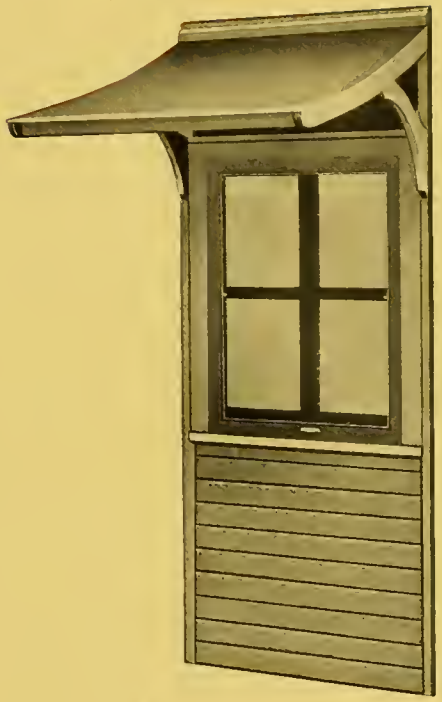


CLOSED.

M. & M. Single Folding Portable Beds. Can be used as lounge during the day and a bed for the night. With a fancy throw-over or bagdad and cushions for day use, they give a cozy and home-like appearance to the room. The frame work is made of well seasoned hard wood, securely ironed, and equipped with portable head and foot boards and wire mattress 6 feet long by 30 inches wide. The frame is made to fasten to the side wall of our houses by means of 6 screws, and when closed and not in use projects only 6 inches into the room. You are not obliged to remove the bedding when you close them up. Note how convenient for sweeping the floor when the bed is closed.

WINDOW PANEL, WITH OUTSIDE BLINDS.

The cut represents a Window Panel complete with Outside Blinds. The window sash are fitted and hung with loose-joint wrought iron butts. The blinds are also fitted, and hung with Clark's patent hinges. The panel is crated and shipped as shown above and ready for use when placed in position.



WINDOW PANEL, WITH WOODEN AWNING AND WIRE SCREEN.

This cut represents a Window Panel fitted with a Wire Screen, complete with fastenings. The window sash are glazed, fitted and hung. The panel with window and screen is crated and shipped as shown above, and ready for use when placed in position. The Wooden Awning is also fitted, but shipped in a separate package, and only needs to be placed in position as shown above and fastened with the screws furnished with it.

DOOR PANEL, WITH WOODEN AWNING.

This cut represents an Outside Door Panel, complete with 5-panel door, mortise lock, loose-joint wrought iron butts, all fitted and hung ready for use when placed in position. The wooden awning is also fitted, but shipped in a separate package, and only needs to be placed in position as shown above, and fastened with the screws furnished with it.

DOOR PANEL, WITH WIRE SCREEN DOOR.

This cut represents an Outside Door Panel, hung and fitted with wire screen door with spring hinges. The 5-panel door has mortise lock, loose-joint wrought iron butts, all fitted and hung ready for use. The door panel with wire screen door is crated and shipped as shown above, all ready for use when placed in position.

WHAT PEOPLE SAY OF THE M. & M. PORTABLE HOUSES.

"IT IS PERFECT AND EXACTLY ACCORDING TO AGREEMENT."

BABIES' SUMMER HOSPITAL

President, Hon. David M. Little.
Vice-President, Chas. W. Haddock, M. D.
Sec'y and Treas., Miss C. Farrington.
Field Secretary, C. E. Bertholf.

Executive Committee—
Mrs. E. P. Dalton.
Mrs D. P. Grosvenor.
Miss Alice Nelson.
S. Chase Tucker, M. D.

Mershon & Morley Co., Saginaw, Mich.

Peabody, Mass., August 25, 1906.

My Dear Sirs: As chairman of the Supply Committee of the Babies' Summer Hospital, I wish to tell you of the great satisfaction the Portable Cottage purchased of your firm has given us. It is perfect and exactly according to agreement.

MRS. D. P. GROSVENOR, Main St., Peabody, Mass.

"PERFECTLY SATISFACTORY."

WM. L. WALTON,
General Merchandise Broker, Nos. 706 and 706½ Penn Bl'g.

Mershon & Morley Co., Saginaw, Mich.

Pittsburg, Pa., April 12, 1907.

Gentlemen:—The No. 6 Portable Automobile House arrived and everything in good condition, and was put together and fits like paper to the wall. It is perfectly satisfactory.

Yours very truly,
WM. L. WALTON.

"RECEIVED WITH GREAT SATISFACTION."

Mershon & Morley Co., Saginaw, Mich.

Marquette, Mich., January 24, 1907.

Gentlemen: I have advices from Norway, Michigan, that the Portable Chapel has arrived. It is now in place and is received with great satisfaction. I do not hesitate to say that I should have had half a dozen just like it in commission years ago, and if I can get in control of funds I have a right to appropriate, I will undoubtedly repeat the order.

I remain, yours sincerely,
G. MOTT WILLIAMS, Bishop of Marquette.

"TWENTY-THREE YEARS A CARPENTER."

Mershon & Morley Co., Saginaw Mich.

Greenport, L. I., New York, Sept. 17, 1907.

Gentlemen:—I had the pleasure of erecting one of your four-room Portable Cottages for the Long Island R. R. Co. at River Head, Suffolk County Fair. I would state it is one of the most complete houses I ever put up; everything fitted perfectly. I have been in the carpenter business for about 23 years, and know a good thing in that line.

Yours respectfully,
CHAS. S. HOWELL,
P. O. Box 166, Greenport, L. I.

"THE TRIP MADE FULLY 8,000 MILES."

MENNONITE BRETHREN IN CHRIST MISSIONARY SOCIETY.

Superintendent on Field,
A. W. Banfield,
Lokoja, Northern Nigeria, West Africa.

GENERAL BOARD.
E. Anthony, Brown City, Mich., Chairman
H. S. Hallman, Berlin, Ont., Secretary.
S. Lambert, Potsdam, Ohio, Treasurer.
P. Cober, Berlin, Ont.
S. Eby, Berlin, Ont.
O. E. Snyder, Yale, Mich.
W. Gratiel, Petoskey, Mich.

Messrs. Mershon & Morley Co., Saginaw, Mich.

Brown City, Mich., April 17, 1906

Gentlemen: It is with great satisfaction that I write you regarding the Portable House purchased from you last August for our Missionaries in Shonga, Northern Nigeria, British West Africa. The excellent manner in which you crated it enabled it to reach destination so far as I have heard in perfect condition. The trip it made was fully 8,000 miles. In going this distance it was transhipped five times. It required very little labor to put it together. Our Missionaries are loud in their praises of it. We invested everything of the kind that we heard of before we placed our order with you, and both Mr. Banfield, our Superintendent on the field, and myself, have had extensive information along this line.

Again expressing our entire satisfaction with the house,

Yours respectfully, REV. E. ANTHONY.

NOTE—This was one of our Double Roof and Double Wall Houses.

"WARM AND DRY ALL WINTER."

Office of C. L. STEELE, Private Banker, 119 LaSalle St., Room 82.

Mershon & Morley Co., Saginaw, Mich.

Chicago, Ill., April 6, 1906.

Gentlemen:—My house has been delightfully warm and dry all winter and has withstood some terrible windstorms off Lake Michigan, as we are near the water. It has been quite a curiosity to many people who have never before seen anything so small made into an artistic home. I have gas and plumbing in it and one neighbor has made me a standing offer to buy as soon as I want to dispose of it.

Very truly yours, MRS. C. L. STEELE.

NOTE—The Portable House purchased by Mrs. Steele was our No. 07 3-Room 12 feet 8 inches wide by 22 feet 2 inches long, with Single Roof and Single Walls. The house was shipped to Mrs. Steele September 15, 1905, and erected at Wilmette, Ill., north of Chicago, on the Lake Shore.

We do not recommend our Single Roof and Single Wall Houses for Winter use, but our Double Roof and Double Wall Houses have always proved perfectly satisfactory for winter and all the year round.

MERSHON & MORLEY CO.

WHAT PEOPLE SAY OF THE M. & M. PORTABLE HOUSES.

"LIKE IT MUCH BETTER THAN OTHER PORTABLE HOUSES WHICH I HAVE SEEN."

Capital, $100,000. Surplus, $100,000.

Mershon & Morley Co., Gloucester, Mass., May 23, 1907.
Saginaw, Mich.

Dear Sirs:—I am very much pleased with the house, and like it much better than other portable houses which I have seen. Please send me another catalogue, as I have had a good many inquiries about the houses you make.

Yours very truly, HORACE A. SMITH.

"SATISFIED CUSTOMER."

PROSPECT ST. M. E. CHURCH,
REV. J. H. E. SCHULTZ, Pastor. Residence, 97 Fair St.

Mershon & Morley Co., Paterson N. J. Oct. 10, 1906.
Saginaw, Mich.

Gentlemen:—As it is doubtless a pleasure to hear from satisfied customers, I am writing to express our complete satisfaction after a summer's trial of our pretty little cottage home among the Preakness Mountains in northern New Jersey. The cottage was found to be all that we had anticipated for it. We have erected it permanently upon a concrete foundation and have a small cellar, about 8x10, under one corner, and a good garden as an adjunct. The cellar cost about $50.00 additional. I also painted the building within and without, staining the floors, in all using about 8 gallons of paint. I used apple green inside for the sides and ivory white for the ceiling. Outside painted white, with roof bottle green. We have literally hundreds of callers, and all are delighted, "Cozy," "cute," "too lovely for anything," were the words usually expressed. I am a clergyman, and our cottage was my vacation home. It is only five miles from the city, and I was able to attend to all my duties as a minister, preaching every Sunday, etc., and yet enjoyed a genuine outing. I enclose two photographs, one of myself upon the porch, and the other a picture of our Ladies' Aid Society's visit.

I am very truly yours,
J. H. E. SCHULTZ.

"WELL PLEASED WITH IT."

CAPITOL WONDER MINES COMPANY.

Mershon & Morley Co., Wonder, P. O., Nevada, March 14, 1907.
Saginaw, Mich.

Gentlemen:—Some time ago we received from the Nevada Wonder Mining Company one of your Portable Houses. We have set it up and must say we are well pleased with it.

Very truly yours,
M. C. SMITH.

"HIS MONEY WELL INVESTED."

Mershon & Morley Co.,
Saginaw, Mich.

527 Washington St.,
Weymouth, Mass., Feb. 13th, 1906.

Gentlemen:—Rather a late day say you to acknowledge the receipt of anything as large as a Three-Room Cottage, but my object in not writing has been that I might thoroughly test the same. I am greatly pleased with my purchase and consider my money well invested; am living quite comfortably in said Cottage and will speak a good word at anytime to a prospective buyer.

Yours very respectfully,
G. W. TEWKSBURY.

"IT CERTAINLY MAKES A PRETTY LITTLE COTTAGE."

Mershon & Morley Co.,
Saginaw, Mich.

HOWARD ICE CO.
Watertown, Mass., April 28, 1905.

Gentlemen: "House arrived in good condition. It certainly makes a pretty little cottage and attracts a great deal of attention. The old gentleman upon whose land it is situated takes lots of pleasure in bringing his neighbors and friends down to look at it. There is another Portable House a short distance from mine and its owner felt much disappointed when he saw the difference. The house was erected with great ease, and I would be pleased to answer any information that I could give to a Portable House customer."

Yours very truly,
F. H. HOWARD.

"VERY MUCH PLEASED WITH IT."

I. J. Steane, Pres. A. B. Wells, Sec'y. J. S. Hecker, Treas.
THE HARTFORD STERLING CO.
Makers of Sterling Silver and Silver Plated Hollow Ware.
Office and Factory 48-50 North 6th St.

Mershon & Morley Co.,
Saginaw, Mich.

Philadelphia, Pa., May 14, 1907.

Gentlemen:—I received the 05, 4-Room Portable Bungalow all right and have put it together and am very much pleased with it.

Yours truly,
A. B. WELLS.

"HAD A STRING OF INTERESTED ONES ALL DAY."

Auburn, New York, May 15, 1907.

Messrs. Mershon & Morley Co.,
Saginaw, Mich.

The 3-Room Portable Cottage arrived last Friday. It is very satisfactory and attracts quite a bit of attention. Last Sunday there were several hundred people out at the park and I had a string of interested ones all day. There have been a great many persons who talk of buying.

Very truly,
E. S. NOWATTNY

"RECEIVED IN PERFECT ORDER."

FIRST NATIONAL BANK, Euclid Ave
Cleveland, Ohio, July 31, 1906.

Mershon & Morley Co.,
Saginaw, Mich.

Gentlemen:—Portable Cottage received in perfect order, and have set it up to my entire satisfaction.

Yours truly. W. J. TAYLOR.

WHAT PEOPLE SAY OF THE M. & M. PORTABLE HOUSES.

"DOUBLE ROOF AND DOUBLE WALL HOUSE IS WARMER IN COLD WEATHER AND COOLER IN HOT WEATHER THAN BRICK."

Messrs. Mershon & Morley, Prescott, Ariz., Nov. 10th, 1902.
Saginaw, Mich.

Gentlemen:—The No. 05, 4-Room Cottage, with double roof and double 7 1-2 ft. side wall panels, which I purchased of you in August, I erected myself and have been living in it ever since.

For the benefit of any of your prospective purchasers of one of these houses, I would like to say that you made no misrepresentations of any kind to me as regards the construction and stability of this house. It is warmer in a cold climate, and cooler in a hot climate, than a house built with an 8-inch solid brick wall, from the fact of its double walls and double roof with an air space. We have had several severe wind storms since the house was erected and it stood through without a tremble or shake, and it has given the best of satisfaction.

The house arrived so that we unloaded it Friday noon, and my son and myself erected it alone and stayed in it the first Sunday night following same being completed.

Yours truly, SETH DAVIS & SON.

"PERFECTLY SATISFACTORY. HAVE GIVEN IT A GOOD TEST."

ALEX. SMITH & SONS, CARPET CO.
Silversmiths' Bldg., 121-7 Wabash Ave.
Messrs. Mershon & Morley Co., Chicago, Ill., July 11, 1903.
Saginaw, Mich.

Dear Sirs:—The No. 05, 4-Room Cottage is now set up in good shape, and as far as I can judge is perfectly satisfactory. Have given it a good test as to leakage, as it has rained hard for the past two nights, and we have not been able to discover a single leak. In fact, in every way, I consider it perfectly satisfactory, and if you have any prospective Chicago purchasers send them to me for recommendation. Furthermore, I would say that I should judge by the comments of my friends at the lake that you may have several orders for next season. Wishing you every success, I beg to remain, very respectfully,

F. L. HARDCASTLE.

"BETTER THAN EXPECTED."

Mershon & Morley Co., Tottenville, L. I., N. Y., Aug. 10, 1903.
Saginaw, Mich.

Dear Sirs:—We received the house a couple of weeks ago, and have it up and are living in it. It is perfectly satisfactory, and in fact better in many respects than we expected.

Yours, etc., M. S. JURES.

"MY FRIENDS WANT THEM."

1520 Fourth Avenue,
Mershon & Morley Co., Louisville, Ky., April 28, 1903.
Saginaw, Mich.

Dear Sirs:—My little Cottage has made several friends who want one for themselves and so I am writing to you to send me two catalogues and price lists. The Cottage was used all winter and was made comfortable with a small cook stove.

Yours truly,
MRS. E. V. WILDER.

NOTE—The Cottage sold Mrs. Wilder had only a Single Roof and Single Walls.

"THE MEMBERS HIGHLY PLEASED."

THE UNITED STATES PLAYING CARD CO.
Mershon & Morley Co., Remington, Ohio, May 12, 1904.
Saginaw, Mich.

Gentlemen:—The No. 05, 4-Room House arrived in due time and put up in 12 hours. Rain and strong winds delayed in the erection, otherwise it would have been completed in 8 or 9 hours. The members are highly pleased with it.

Yours truly,
THE RIPPLE OUTING CLUB,
R. J. WELAGE, Pres.

"I WISH TO COMPLIMENT YOU."

J. A. FAY EGAN CO.

New York, Dec. 5th, 1902.

Messrs. Mershon & Morley Co.,
Saginaw, Mich.

Gentlemen:—Please pardon the writer's tardy acknowledgement of your last letter. The 3-Room House shipped by you has been erected and is extremely satisfactory in all its details.

Yours very truly,
TOM T. WALLER,
2nd Vice-President.

"VERY AGREEABLY SURPRISED."

Office of NASHVILLE ROOFING & PAVING CO.
Nashville, Tenn., April 6, 1903.

Mershon & Morley Co.,
Saginaw, Mich.

Gentlemen:—I have just finished erecting the house. I must say I was very agreeably surprised to find that all sections were so accurately constructed that I could fit them together perfectly without any jointing or trimming whatever, and I am more than pleased with the substantial and beautiful appearance of the completed structure, which looks even better than the picture.

Yours very truly,
W. M. LEFTWICH, JR., Gen'l Mngr.

"TWO WINTERS IN THE MOST EXPOSED PART OF OUR HARBOR."

DAILY CHRONICLE.
Portsmouth, N. H., March 24, 1904.

O. L. Frisbee visited Tavistock Island, Monday, for the first time for five months. He found the Anchorage in first class condition. This is a Portable House which was shipped from the West ready to set up, and the two winters in the most exposed part of our harbor has fully demonstrated the stability of the houses in our climate.

"SURPRISED HOW WELL IT WENT TOGETHER."

"EXACTLY AS REPRESENTED."

THE FISHER MAIDEN OPERA CO.
Chestnut Street Theatre.
Philadelphia, Pa., Sept. 8, 1903.

Mershon & Morley Co.,
Saginaw, Mich.

Dear Sirs:—You will pardon my seeming neglect to acknowledge the safe arrival of the No. 05, 3-Room Portable Cottage with double roof and double 7 1-2 ft. side walls that I received from you several weeks ago. I found the house exactly as you represented it to be, easily erected, cool in warm weather and warm in chilly days. I have given it two coats of white paint and green trimmings; and as for the interior I have a fire place in it. The sitting room is papered in Nile green and enameled white wood work. The bed-room and kitchen have the walls painted. The house is cozy and comfortable, and makes an ideal little home (for summer or winter) nestling among the trees and shrubbery. I am delighted with it. In the spring when the grass is green and the flowers are at their best, will send you a photo of my place.

Yours very truly,
RUSSELL WAKEFIELD.

"ALL YOU REPRESENTED THEM TO BE."

Elk Lodge, Lebanon Lake, Sullivan Co., N. Y.,
Nov. 6th, 1902.

Messrs. Mershon & Morley Co.,
Saginaw, Mich.

Gentlemen:—I have forgotten whether I sent you a testimonial or not. But after giving 6 of your No. 02 Hunters' Cabins a thorough test, I can recommend them as being all that you represented them to be as a portable, serviceable hunter's home. They are as good as could be.

Yours truly,
C. W. CHAPIN.
